

Importing from Another Captivate 2 Project

You may wish to import slides or objects from another Adobe Captivate 2 project you have.

To do this, from the 'File' menu, select 'Import/Export' and from the pop-out menu that appears, select 'Import Slides/Objects from other Adobe Captivate projects...'

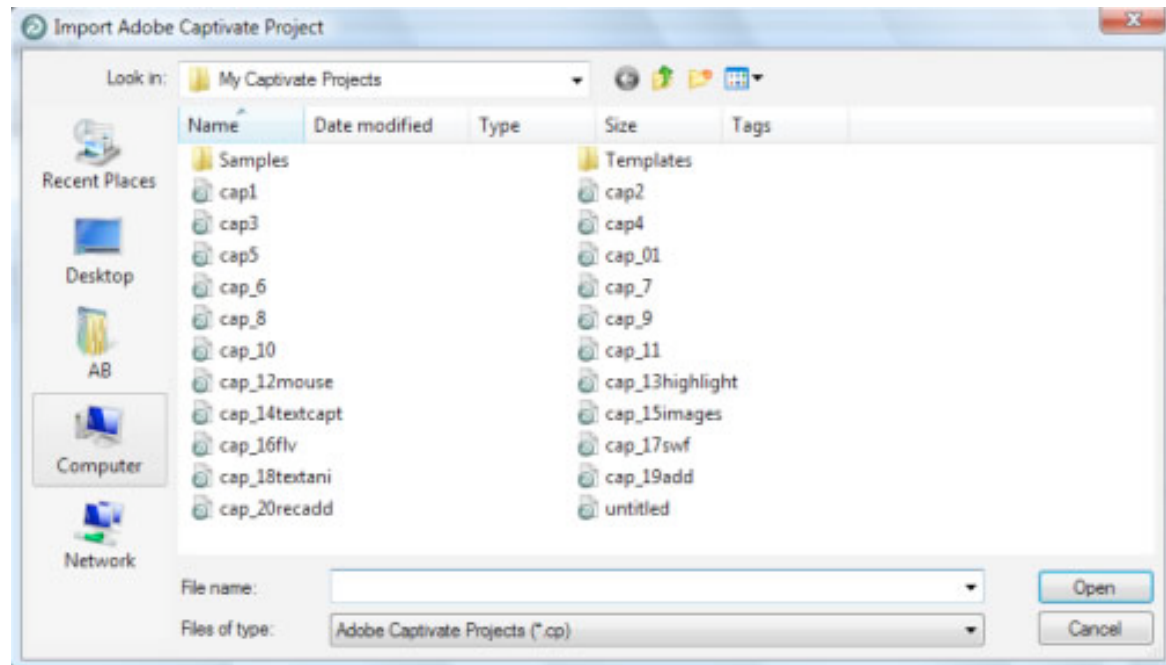

Adobe and Captivate are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.

An Introduction to Adobe® Captivate™ 2

The 'Import Adobe Captivate Project' dialog box will open, where you can select the project you wish to import from.

With your '.cp' file selected, click 'Open'.

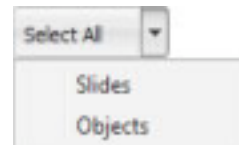

An Introduction to Adobe® Captivate™ 2

The 'Import Project' dialog box will open.

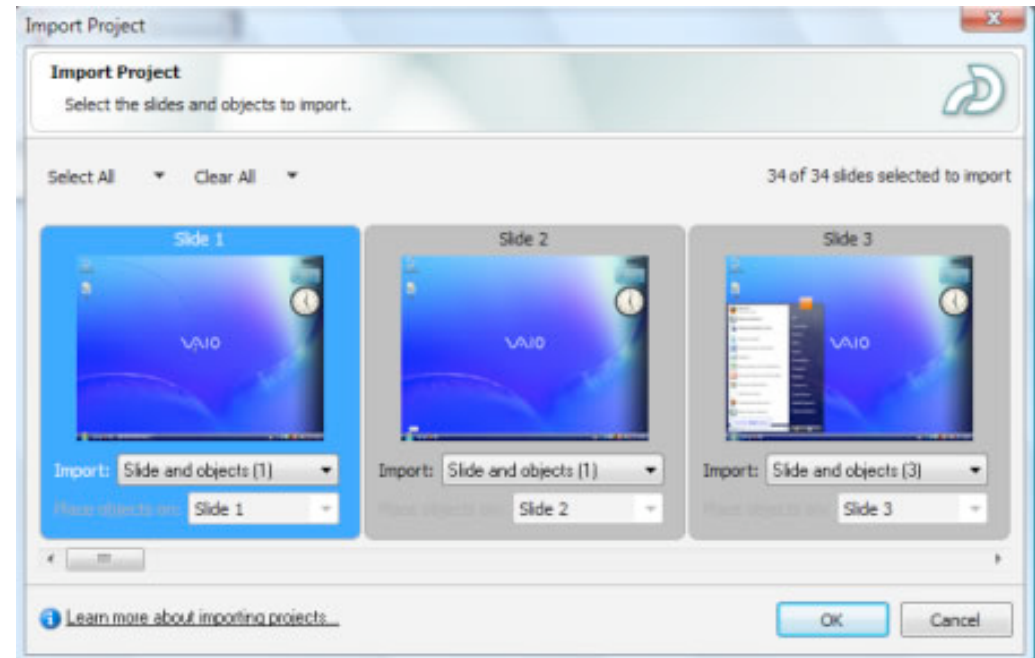

In this dialog box, you can specify what to import. By default, everything will be selected for import.

You can import 'slides', 'objects', or 'slides and objects'. There are two global options at the top of the dialog box that make this much easier.

Click the drop-down arrow next to 'Select All' to select 'all slides' or 'all objects'.

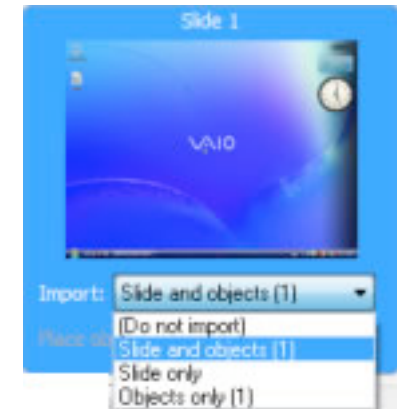

Similarly, click the drop-down arrow next to 'Clear All' to clear 'all slides' or 'all objects'.

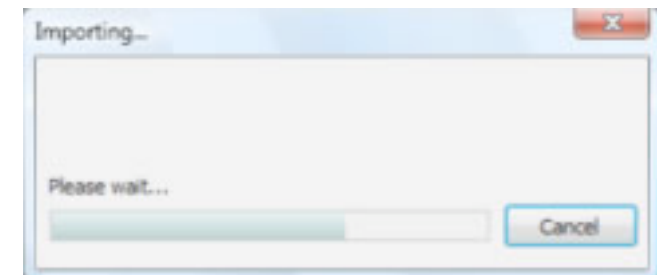

Alternatively, you can work through each slide in the project to choose whether to import just the slide, just the objects or both slide and objects.

Once you have made your selection, click 'OK'.

Your slides and objects will be imported into your project after the currently selected slide.

TIP – *it will make your life much easier if your projects slides are the same size!*
