

## Creating New Pages

Each time you create a new post, it goes to the top of your blog. It may be however, that you wish to display static information on your blog – for example – an ‘about’ page that tells any visitors a bit about you, or a ‘useful documents’ page where you can store files that visitors may find useful.

Adding a new page is easy.

On the dashboard, click the ‘**Write**’ tab, and select ‘**Write Page**’ from the sub-tabs.

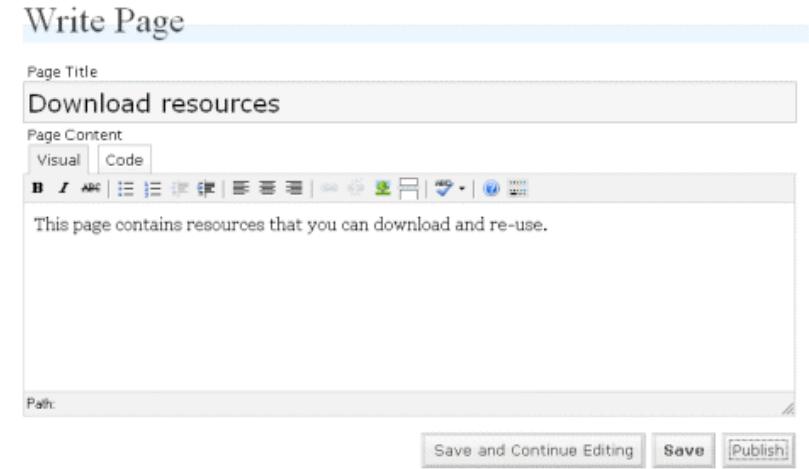

Although this looks similar to writing a new post, this is a new page you are creating.

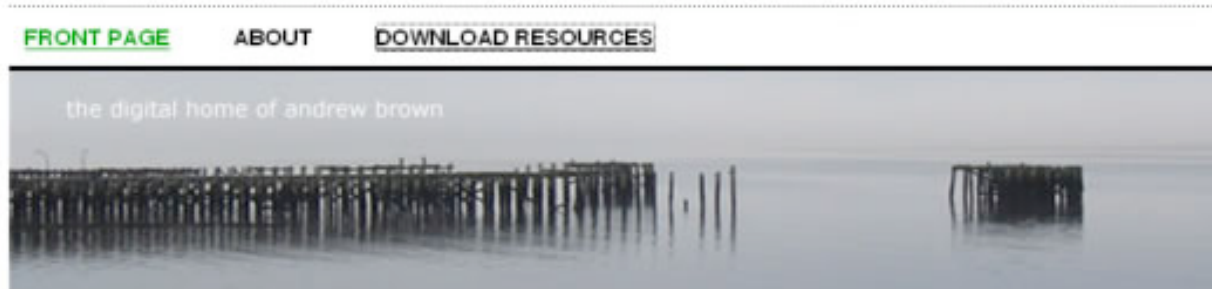

# An Introduction to WordPress

Give the page a **title**, and add the **content** in the boxes provided.

Once you have completed your page, click **‘Create New Page’**.

## Whereisab's Weblog

Your page will be created.
